

Botox & Filler

General Information

Inform your clinician about your routine medications and any diseases.

It is normal for the treatment area to feel tender for a couple days after the treatment.

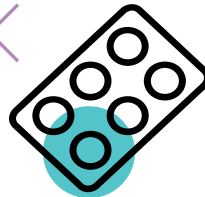

You should apply an ice pack after the procedure to help reduce swelling.

Swelling usually disappears within 48 hours. If your lips were also treated, swelling can last up to a week.

Do not worry!

Temporary swelling, bruising, nausea, fatigue, flu-like symptoms may occur.

Patients who are pregnant or nursing, have a continuous Accutane treatment, suffering from active cold sore/ fever blister or skin infection are not suitable for this treatment.

You can wear makeup after the treatment if there are no post-operative complications.

You should not rub the injection site and avoid stressful exercise for 24 hours.

Durability

Botox: 6 months

Filler: 7 to 12 months
